

Case Study: Oil to Gas Conversion – Can I afford to replace my boiler?

nationalgrid

Metacomet Country Club – East Providence, RI

Air-Tech recently had the opportunity to partner with National Grid and Metacomet Country Club in East Providence to provide a solution to their antiquated oil fired boiler systems. Air-Tech was able to furnish and install (2) new triangle tube solo 399 modulating gas boilers and (2) new smart 120 indirect hot water makers. New gas lines were run across the 18th fairway.

There was question if the club was going to be able to afford the capital expenditures of this particular project. After the costs were outlined with the utility savings and energy rebates, - a new question was posed: How can we afford not to?
